## CAREER OBJECTIVE

Seeking a career as a Software Tester that provides opportunity to develop skills in programming and engineering, contribute with a high performance team working on cutting edge of technology.

## ACHIEVEMENTS

### PRIME CASES

- Worked on different projects for Mobile website testing and **Mobile Android app and IOS app testing** including desktop and automated same using **Appium using JAVA (OOPS)**.
- Expertise in software testing application in **Agile Process** with juggling multiple tasks and priorities with Continuous Integration.
- Experience in different types of testing: for example Black box testing, Automation (Selenium), Functional, GUI, System, Integration, UAT, Regression, Compatibility, Usability Testing, Performance.
- Understanding of SDLC, Bug life Cycle, Agile scrum, sprint planning & retrospective, Bug Triage, following all the standard process of QA at different stages of STLC and mentor team member on testing and checking process.
- Possess experience in all phases of life cycle, including requirements gathering, risk analysis, project planning, scheduling, and setting up environment, testing, defect tracking, management, and reporting.

### TECHNICAL CASES

- Automation using **selenium**: Knowledge on IDE, Web driver tool , Appium, GIT, which help to reduce the manual effort of regression after project signed off
- Done Automation failure Analysis and fixed same to run the automation with Continuous Integration of new projects.
- **Used tool**: Web page test and Charles proxy (2G/3G/WI-Fi testing), fiddler and different add-ons helps in testing and for IOS app in X-Code using Instruments.
- Worked on Search Engine Optimization/Traffic-project & Notification & Reviews by Customer and Seller for Junglee.(Service Provided by Amazon
- Currently working on IOS App for functional and Nonfunctional Testing.

### BUSINESS CASES

- Analyzed business requirement, software requirement specification to create test plan and test case for manual testing and test methodologies with the knowledge of customer/user mindset.
- Proficient in software development life cycle including test strategy preparation / test plan, test case preparation & execution incl. bug tracking taking them to closure in consultation with various stakeholders.

## WORK EXPERIENCE

Associate Product Engg.	Symphony Teleca	1 <sup>st</sup> April 2013	23 <sup>rd</sup> May 2014	Bangalore
Quality Assurance Technician	Amazon	26 <sup>th</sup> May 2014	4 <sup>th</sup> Nov 2016	Bangalore
Quality Analyst	Visenze	14 <sup>th</sup> Nov 2016	Till Date	Singapore

**Total Experience:** 4 year 0 months.(Location: Bangalore, Singapore)

## PROJECT SUMMARY

### PROJECT 1:

#### NCR

Client : Retailx from USA  
Duration : May 2013 – May 2014  
Platform : Windows

Technology : JAVA  
Team Size : 54

**Description:** NCR develops, licenses, implements and supports software application for retailers, wholesalers and distributors of fast moving consumer goods, mainly in the grocery, convenience store and foodservice store. Security module contains Users, Roles, function, fields and application. Customers Order Management module help to interact with user as to generates Order and can have list of item save according to user convenience and list of all default items. Master data Management module help to generate item and saved attribute in database.

### PROJECT 2:

#### Jungle [Service Provided by Amazon]

Technology : JAVA  
Platform : Desktop , Mobile Web & Mobile App  
Team Size: 20  
Duration: May2014–Till Date

**Description:** Jungle is a price comparison website as to shopping online (ecommerce website powered by Amazon). Where we can search, filter the products based on user input. Website has post your free ad features where user can post the ads for old good at free of cost. User can write the review of products and share the experience of buying with different sellers.

### PROJECT 3:

#### Visenze

Technology : Machine Learning/AI  
Platform : Windows, Desktop  
Team Size: 20  
Duration: May2014–Till Date

**Description:** ViSenze uses Artificial Intelligence powered visual recognition that enables publishers to easily monetize all their online visual content

### Roles and Responsibilities of Project 1, 2 and 3

- Preparing and executed DOD [definition of done] check list for user story picked up in the sprint.
- Understand the functional requirements of the projects and performed the functional testing using Manual testing process in agile process and juggle with multiple tasks in sprints and priorities of task to taken as decided in scrum.
- communicated with business Analyst for specification requirement with customer user mindset and worked with functional specification
- Preparation of test cases, preparation of Test Plans includes test methodologies that describes the features and functions to be tested and call out features and functions not to be tested.
- Managed, documented and controlled all the Test Cases and test results and also in a status update report using i.e.: Test Rail and Test Case management tool, MS Excel , Email and even done a pesticides paradox.[Periodic restricting of test to run on build deployment.
- Preparing Daily Execution Report – Involved in preparing the Daily Execution Status report and sharing with managers and leads and Business team.
- Reported identified issues to the Jira Bug Tracking tool and verified/commented to its closure and creating a release document.
- Involved in entire process including reports and back-end data validation.
- Perform regression testing and re-testing after closing the defects or new build after fix.
- Involved in UAT, Usability testing, UI testing

- Participate in review and creating of test plan, test cases review bug triage meetings and shared the valuable feedback.
- Performed backend testing to check backend data and data integrity using **AWS service provided by Amazon**
- Performed server side and client side validation.
- Perform and validate positive, negative, system and integration testing and database testing using simple SQL query.
- Deployed Build to the testing environments using internal tools available with Amazon, i **Apollo, Brazil** and **APACHE TOMCAT** in the pervious company.
- Created and executed automated software test plans, cases and scripts automation using a web-driver for GUI elements with **Continuous Integration using GIT**.
- Handling traffic (Include SEO) & community functionality of website.
- Worked on Mobile website testing and Mobile android app testing for different features.
- Worked on regression twice a week for production deployment.
- Worked on performance testing using webpagetest.com.
- Worked on testing the features at different network speed i.e. **2G/3G/WI-Fi/network throttling using Charles proxy**.
- Worked on non –functional testing on mobile website & app using various tools, add-ons available in browser and user-agents.
- Currently working on IOS app testing and Notification projects.(Manual & automation)

#### ACADEMIC QUALIFICATION

B. E (C.S.E)	Y2008-2012	Visvesvaraya Technological University, Belgaum
Class12th/P.U.C	Y2008	Pre–University Board, Ranchi.

#### TECHNICAL EXPOSURE

- Operating System : Window, Linux, Mobile Web & Mobile App.
- Programming Languages : C with Data Structures, JAVA (OOPS).
- Bug Tracking Tool : Reporting Bugs in Jira
- Database : IBM I Series , AWS provided by amazon
- Automation tool : Selenium, Appium

#### PERSONALITY TRAITS

- An optimist having strong will power.
- Good communication and interpersonal skills.
- Good listener and quick learner
- Curiosity, Dive –deep for details.

#### INTERESTS

- Reading, Sketching and Learning new Technology
